

Details:

Contract Name: Sensato, Inc.

Contract Number: 1156

Supplier: Sensato Cybersecurity

Agreement Term: 11/12/2017 – 11/12/2020

About Sensato Services:

Sensato has exclusively focused on healthcare cybersecurity, privacy and compliance. The company's leadership and core team members have over 125 years of healthcare information technology experience, which is applied to the development of risk identification, cybersecurity strategy and other related solutions. Sensato developed the first Security Tactical Operations Center specifically for healthcare, which has deployed more than 8,000 sensors across 120 countries to gather the latest threat intelligence. Sensato also founded the Medical Device cybersecurity task force (MDCTF), comprising more than 80 members representing healthcare providers and medical device manufacturers. The MDCTF has been approved as an Information Sharing and Analysis Organization (ISAO) and works closely with the U.S. Food and Drug Administration (FDA), the U.S. Dept. of Defense (DOD) and other state and federal organizations to gather and share intelligence.

Value to CCLCS Members: The numbers have become numbing. Year after year, cyberattacks continue to escalate in frequency, severity and impact. Prevention and detection methods have proved largely ineffective against increasingly adept assaults, and many organizations don't know what to do, or don't have the resources to combat highly skilled and aggressive cybercriminals. With Sensato, CCLCS has negotiated pricing tailored for CCLC members.

Members have access to:

- **MD-COP:** Medical Device Cybersecurity Operations Program: Provides healthcare organizations with a medical device-related dedicated security operations center, breach detection system, cybersecurity risk assessment and policies, manufacturers risk assessment and scoring, best practices and ISAO benefits.
- **Nightingale:** is a network intrusion detection solution. A honeypot forensic collection tool combined with a countermeasures platform that is installed on an organization's network, which detects attempts at unauthorized use of information systems. When network intrusions such as those involving network-connected medical devices occur, the organization is immediately alerted. Nightingale complements first tier cybersecurity tools by providing a simple, effective approach to breach detection.
- **CTOC:** Cybersecurity Tactical Operations Center (CTOC) is a managed service staffed 24 hours a day, seven days a week that remotely monitors organizations and allows them to detect emerging cybersecurity threats across the environment.
- **Advisory Services:** Incident Response, Penetration Testing, Risk Assessments, and other consulting and training services.

Requirements to Participate/Method to Access

Interested facilities must be CCLCS members to access this agreement. A signed Participating Member Designation Form (PMDF) is required. For CCLC Solutions negotiated rates and terms, please contact the CCLC Solutions team at cclcsolutions@cclcnny.org. For more information, please contact the CCLC Solutions team or the following contact:
